And More!

Capture all of life's wonderful moments and make them into a lasting memory!

It's As Easy As

1 Shoot

2 Bind

3 Enjoy!

Dear Customer,

Thank you for choosing PhotoBook Creator by Unibind®.
Follow this manual carefully to insure safe and reliable operation of your new binding machine.

When you receive your new Unibind® system

- Unwrap all packaging material
- Unwind the cable completely
- Plug in your new Unibind® system
- Your binding machine is now ready to use

How to use the Unibind® system

1. Place the documents you wish to bind into your Unibind® cover. Make sure the pages line up evenly.
2. Place your Unibind® cover onto the binding compartment. The light will turn RED as soon as the cover makes contact. There is no on or off switch - the cover activates the binding cycle. Leave the cover on the machine until the light changes from RED to GREEN. The GREEN light indicates that the binding process is complete [about 90 seconds]. Allow the document to cool for approximately 60 seconds. You may leave the newly bound document on the machine to cool or gently remove it.
3. Your bound document is now ready!

Security

- The machine is heated at the surface of the binding compartment while it is binding - pay attention and be careful if you want to move the machine.
- NEVER use the binding machine in a humid place. The machine should be placed on a flat surface.
- The machine can only be used for the purpose as described in the manual
- In case of damage to the machine please contact your local distributor where the machine was purchased.
- All repairs of Unibind® machines may only be done by skilled personnel. Inexperienced repair can lead to serious damage for the user. Refer to your warranty card for repair information.
- The power of the machine is turned off by removing the plug from the socket. The socket must be installed near the machine and must be within one's reach.
- 90 Day Warranty
